

Scalable Software Helps You Take Control of Your IT Budget

Survey™ reveals opportunities to save money on software and hardware costs.

STOP writing a blank check to acquire, support and maintain your IT assets!
Reduce and control your budget.

Survey™ is a cost management application that provides detailed, comprehensive true usage information for the desktop and server software, hardware and printers in your organization.

Survey's asset intelligence gives you a business view of the computer systems and software you have installed. The asset usage reports provide the unique insight you need to:

- ▶ Stop overbuying software licenses
- ▶ Optimize the software licenses you already have
- ▶ Remove the cost burden of maintaining and supporting underutilized software and hardware
- ▶ Gain fair value from annual software license reviews and "true-up" negotiations
- ▶ Accurately plan your IT budget for the next year and forecast future budget needs
- ▶ Achieve accurate compliance with vendor licensing

No other application provides the level of detail you need to recover value from unused or underused hardware and software. Even asset management applications can't uncover true usage information.

Survey puts IT budget control in your hands.

Application Name	Number Installed	Number Installed and Used	Number Installed and Not Used	Number Not Installed
Access 2000	125	44	81	54
Access 2002	1	0	1	178
Access 2003	45	22	23	134
